CCRadio Solar Bluetooth Instruction Manual Changes

Page 3, About the CCRadio Solar BT with Bluetooth Receiving, disregard the sentence in the third paragraph:

“Please fully discharge the battery (by leaving the flashlight on until it goes off), once a year, and then recharge for 12 hours via a USB cable or optional AC Adapter.”

Correction: It is not recommended to fully discharge the lithium battery.

Page 6, Safety Instructions, the following content has changed underneath the section titled, PLEASE READ BEFORE USING THE RADIO, here is the corrected content:

We recommend the internal battery to be fully recharged every 6 months if the radio has not been used. This will help maintain optimal battery life.

Page 18, Radio Operation, #5 STATION MEMORY BUTTONS 1-5:

The content below is not included in your instruction manual:

For additional memory presets, see page 30.

Page 21, Radio Operation, #10 BATTERY SELECTION SWITCH:

The content below is not included in your instruction manual:

The lithium battery will charge whether powered on or off. The switch does not need to be set to LI when charging.

Page 24, Radio Operation, Disconnect

To return back to AM/FM radio from Bluetooth, press and release the Band button.

Page 24, Radio Operation, #14 PHONE CHARGER JACK (STANDARD USB PORT):

The content below replaces the paragraph in the instruction manual:

In an emergency, you may need to power your cell phone to make an important call. Attach your phone's charging cable (not included) to the full-size USB port located under the rubber flap on the right side of the radio. You will notice the battery icon on the screen moving to indicate that charging has begun. Your phone should also indicate that it is charging. If your phone or device will not accept the radio charge, then try powering off your device and try again. When the radio's lithium battery is fully depleted then charging will stop. Other functions of the radio may still work.
